PROFILE SUMMARY

Full Stack Developer with 4+ years of experience in developing web and mobile applications using Laravel and Flutter. I have hands-on experience in building and deploying Flutter applications to the Google Play Store and developing Laravel web applications with production server deployment. I have worked on logistics, warehouse management, and field operation applications, with strong in REST APIs, MySQL, offline data synchronization, and third-party integrations.

WORK EXPERIENCE

Mazeworks Solutions Private Ltd. — Software Developer

Feb 2022 – Present

- Developed and delivered 6+ web and mobile applications using Laravel and Flutter across logistics, audit management, and warehouse domains.
- Designed and implemented scalable RESTful APIs and backend services to support seamless integration between web and mobile applications.
- Built and maintained Flutter applications for field operations, warehouse management, and driver management systems.
- Designed and optimized MySQL database schemas and queries to improve application performance and data integrity.
- Implemented offline-first functionality using SQLite and background synchronization for uninterrupted mobile operations.
- Integrated third-party services, including QR/Barcode scanning, Google Maps, Google Sign-In, and face-based attendance verification.
- Deployed Laravel applications on production servers and published Flutter applications to the Google Play Store.
- Provided production support, bug fixes, and performance enhancements to ensure reliable and scalable business applications.

EDUCATION

Master of Computer Application

May 2022

Ayya Nadar Janaki Ammal College | Sivakasi, Tamil Nadu

B.Com (E-Commerce)

May 2020

Ayya Nadar Janaki Ammal College | Sivakasi, Tamil Nadu

TECHNICAL SKILLS

Programming Languages: PHP, JavaScript, Dart

Web Development: HTML, CSS, Bootstrap, jQuery, JSON

Databases: MySQL

Frameworks & Technologies: Laravel, REST APIs

Version Control: GitHub, GitLab

Mobile Development: Flutter, SQLite, Google Maps API, QR/Barcode Scanning

Deployment & Tools: Visual Studio Code, Android Studio, Postman, Server Configuration

Team Collaboration: Teamwork skills

PROJECT EXPERIENCE

Vendor Invoice Management System

Feb 2022 – May 2022

Role: Laravel Developer (Internship Project)

Developed to automate and simplify vendor invoice handling. Imports sales transaction data, organizes invoice records, and generates printable formats for business documentation, reducing manual effort and improving reporting accuracy while supporting export for auditing and supply chain tracking.

- Engineered invoice creation and transaction storage modules in Laravel, automating end-to-end vendor invoice workflows.
- Architected the MySQL database schema for vendor and sales data, ensuring scalable, audit-ready record-keeping.
- Built PDF and Excel export functionality with integrated barcode generation, streamlining audit and supply-chain documentation.
- Delivered three configurable invoice print formats (Original, Duplicate, Triplicate), cutting manual formatting effort for business teams.

Technology Stack: Laravel (PHP), MySQL, Git

Food Safety GMP Audit Application

May 2022 – Sep 2022

Role: Backend Developer

Built to digitize and manage internal audit processes, allowing organizations to schedule audits, record findings, assign corrective actions, and track progress, with dashboards providing visibility into audit and rectification performance.

- Built a role-based authentication and access-control system, securing audit data across multiple user roles.
- Developed audit scheduling and issue-logging modules, digitizing previously manual audit workflows.
- Implemented end-to-end corrective action tracking workflows, improving accountability and audit closure rates.
- Designed real-time dashboards to monitor audit and rectification progress, increasing visibility for management teams.
- Optimized database queries and operations, improving application responsiveness and reliability.

Technology Stack: *Laravel (PHP), MySQL, Git*

Health and Safety Environment Application

Jan 2023 – Jun 2023

Role: Full Stack Developer

A Laravel backend with a Flutter mobile application for field users to complete safety checklists, record remarks, and submit verification data, improving monitoring and ensuring structured documentation of safety procedures.

- Built REST APIs to power real-time communication between the Flutter mobile app and Laravel backend.
- Developed safety checklist UI screens and workflows in Flutter, enabling field users to log inspections on the go.
- Integrated frontend and backend systems for real-time data updates, improving turnaround on safety verification reporting.
- Modeled complex database relationships using Eloquent ORM, ensuring data consistency across modules.
- Conducted functional testing and resolved defects, improving application stability ahead of release.

Technology Stack: *Laravel (PHP), Flutter (Dart), MySQL, Git*

NTC Route Survey Application

2024 – 2025

Role: Flutter Developer

Assists logistics teams in surveying routes before transporting heavy cargo, capturing obstacles such as low bridges, narrow roads, and overhead lines, along with location data and photos, even in offline mode.

- Built a Flutter mobile application with Google Maps integration for live route surveying.
- Implemented hurdle-marking features with photo documentation, helping logistics teams flag route obstacles before cargo transport.
- Designed offline-first data storage using SQLite, ensuring uninterrupted surveys in low-connectivity areas.
- Enabled automatic background synchronization once connectivity resumed, eliminating manual data re-entry.
- Integrated REST APIs for real-time data sharing with backend systems, supporting faster route-planning decisions.

Technology Stack: *Flutter (Dart), SQLite, Google Maps API, RESTful APIs, Git*

NTC Driver Application

2025 – 2026

Role: Full Stack Developer

Manages driver attendance and trip expense tracking using face recognition for secure daily attendance verification and photo proof for trip expenses, improving accountability and simplifying expense management.

- Built a mobile application for driver attendance and trip expense tracking, replacing manual paper-based logs.
- Integrated a Python-based face detection model with the Laravel backend, enabling secure, fraud-resistant attendance verification.
- Implemented OTP-based authentication, strengthening login security for drivers.
- Built trip expense entry and photo-upload features with proof-of-expense capture, improving expense accountability.

Technology Stack: *Laravel (PHP), Python (Face Detection), Flutter (Dart), SQLite, RESTful APIs, Git*

IP RING (SCM) — Warehouse & Dispatch Management System

2025 – 2026

Role: Mobile Application Developer

A warehouse and supply chain management system handling packing, storage, picking, invoice mapping, and dispatch operations, with web and mobile applications coordinating in real time using QR-based tracking.

- Developed packing, scanning, and dispatch modules in Flutter, streamlining warehouse fulfillment operations.
- Implemented QR-based tracking for inventory movement, improving traceability across the supply chain.
- Built picklist management and invoice-mapping features, reducing manual order-processing steps.
- Integrated the mobile application with the web backend via REST APIs, enabling real-time coordination between warehouse and office systems.

Technology Stack: *Python (Frappe Framework), HTML, CSS, JavaScript, Flutter (Dart), SQLite, RESTful APIs, Git*
