PROFILE SUMMARY

Full Stack Developer with 4+ years of experience in developing web and mobile applications using Laravel and Flutter. I have hands-on experience in building and deploying Flutter applications to the Google Play Store and developing Laravel web applications with production server deployment. I have worked on logistics, warehouse management, and field operation applications, with strong in REST APIs, MySQL, offline data synchronization, and third-party integrations.

WORK EXPERIENCE

Mazeworks Solutions Private Ltd. — Software Developer

Feb 2022 – Present

- Developed and delivered 6+ web and mobile applications using Laravel and Flutter across logistics, audit management, and warehouse domains.
- Designed and implemented scalable RESTful APIs and backend services to support seamless integration between web and mobile applications.
- Built and maintained Flutter applications for field operations, warehouse management, and driver management systems.
- Designed and optimized MySQL database schemas and queries to improve application performance and data integrity.
- Implemented offline-first functionality using SQLite and background synchronization for uninterrupted mobile operations.
- Integrated third-party services, including QR/Barcode scanning, Google Maps, Google Sign-In, and face-based attendance verification.
- Deployed Laravel applications on production servers and published Flutter applications to the Google Play Store.
- Provided production support, bug fixes, and performance enhancements to ensure reliable and scalable business applications.

EDUCATION

Master of Computer Application

May 2022

Ayya Nadar Janaki Ammal College | Sivakasi, Tamil Nadu

B. Com (E-Commerce)

May 2020

Ayya Nadar Janaki Ammal College | Sivakasi, Tamil Nadu

TECHNICAL SKILLS

Programming Languages: PHP, JavaScript, Dart

Web Development: HTML, CSS, Bootstrap, jQuery, JSON

Databases: MySQL

Frameworks & Technologies: Laravel, REST APIs

Version Control: GitHub, GitLab

Mobile Development: Flutter, SQLite, Google Maps API, QR/Barcode Scanning

Deployment & Tools: Visual Studio Code, Android Studio, Postman, Server Configuration

Team Collaboration: Teamwork skills

PROJECT EXPERIENCE

Vendor Invoice Management System

Feb 2022 – May 2022

Role: Laravel Developer (Internship Project)

Developed a web application to manage vendor invoices and sales transactions. The system allows users to generate invoices, maintain vendor records, export reports, and print invoices in multiple formats, reducing manual processing.

- Developed vendor invoice, sales transaction, and vendor management modules using Laravel and integrated them with a MySQL database.
- Implemented PDF and Excel export functionality with barcode generation, enabling users to generate and download business reports.
- Designed multiple invoice print layouts (Original, Duplicate, and Triplicate) based on business requirements.
- Participated in testing, bug fixing, and feature enhancements while collaborating with senior developers during the internship.

Technology Stack: Laravel (PHP), MySQL, Git

Food Safety GMP Audit Application

May 2022 – Sep 2022

Role: *Laravel Developer*

Developed a web-based audit management system to digitize food safety inspections and GMP audits. The application allows organizations to schedule audits, record findings, assign corrective actions, and monitor audit progress through a centralized dashboard.

- Developed backend modules for audit scheduling, audit observations, and corrective action management using Laravel.
- Implemented role-based authentication and user permission management to provide secure access for different user roles.
- Created REST APIs and optimized database queries to improve application performance and data retrieval.
- Designed real-time dashboards to monitor audit and rectification progress, increasing visibility for management teams.
- Worked on bug fixing, feature enhancements, and testing to ensure smooth functionality before deployment.

Technology Stack: *Laravel (PHP), MySQL, Git*

Health and Safety Environment Application

Jan 2023 – Jun 2023

Role: *Full Stack Developer*

Developed a Laravel web application with a Flutter mobile application to manage workplace safety inspections. The system enables field users to complete safety checklists, submit inspection data, and maintain safety records in real time.

- Developed REST APIs in Laravel and integrated them with the Flutter mobile application for seamless data communication.
- Built mobile screens for safety checklists, inspection forms, remarks, and verification workflows using Flutter.
- Designed and maintained MySQL database structures using Eloquent ORM to manage inspection and user data.
- Performed application testing, resolved reported issues, and implemented new requirements based on client feedback.

Technology Stack: *Laravel (PHP), Flutter (Dart), MySQL, Git*

NTC Route Survey Application

2024 – 2025

Role: *Flutter Developer*

Developed a mobile application for surveying transportation routes before heavy cargo movement. The application records route details, GPS locations, photos, and potential obstacles while supporting offline data collection.

- Developed the Flutter mobile application with Google Maps integration for route navigation and survey data collection.
- Implemented obstacle recording with image capture, GPS coordinates, and detailed survey information for logistics teams.
- Designed offline data storage using SQLite and implemented automatic synchronization when network connectivity was restored.
- Integrated REST APIs with the backend system and worked on performance improvements, testing, and bug fixes.

Technology Stack: *Flutter (Dart), SQLite, Google Maps API, RESTful APIs, Git*

NTC Driver Application

2025 – 2026

Role: *Full Stack Developer*

Developed a driver management application to handle attendance and trip expense tracking. The application allows drivers to mark attendance using face recognition and submit trip expenses with supporting images.

- Developed attendance management and trip expense modules using Flutter and Laravel.
- Integrated Python-based face detection with the Laravel backend for secure driver attendance verification.
- Implemented OTP-based login authentication and developed APIs for communication between mobile and backend systems.
- Added image upload functionality for expense records and participated in testing, bug fixing, and feature improvements.

Technology Stack: *Laravel (PHP), Python (Face Detection), Flutter (Dart), SQLite, RESTful APIs, Git*

IP RING (SCM) — Warehouse & Dispatch Management System

2025 – 2026

Role: *Mobile Application Developer*

Developed a warehouse and supply chain management application to support packing, inventory movement, picking, invoice mapping, and dispatch operations. The mobile application communicates with the web system to provide real-time warehouse updates.

- Developed Flutter modules for packing, picklist management, inventory scanning, and dispatch operations based on warehouse workflows.
- Implemented QR code scanning functionality to track inventory movement and improve product traceability throughout the warehouse.
- Integrated the mobile application with backend REST APIs to synchronize warehouse data in real time with the web application.
- Worked closely with the development team to test new features, resolve reported issues, and enhance application performance.

Technology Stack: *Python (Frappe Framework), HTML, CSS, JavaScript, Flutter (Dart), SQLite, RESTful APIs, Git*
